Chlorosulpholipid Cytotoxins

- Disulphate **1** and vinyl sulphate **2** have been isolated from *Ochromonas danica* and *Poteriochromonas malhamensis*, respectively, and their configurations have not been assigned.
- Lipids **3–5** have been extracted from digestive glands of contaminated shellfish *Mytilus galloprovincialis* along the Adriatic coast of Italy and are associated with seafood poisoning. They have been configurationally assigned by NMR spectroscopy using J-based configuration analysis.

Napyradiomycins

- Isolated from terrestrial strains of *Streptomyces* bacteria
- Characterized by spectroscopic, degradative, and X-ray crystallographic means.
- Biological profiles include activity as nonsteroidal estrogen antagonists, antibacterial activity against methicillin- and vancomycin-resistant strains and antitumor potency against colon carcinoma cells
