J. Am. Chem. Soc. **2012**, *134*, 9098.

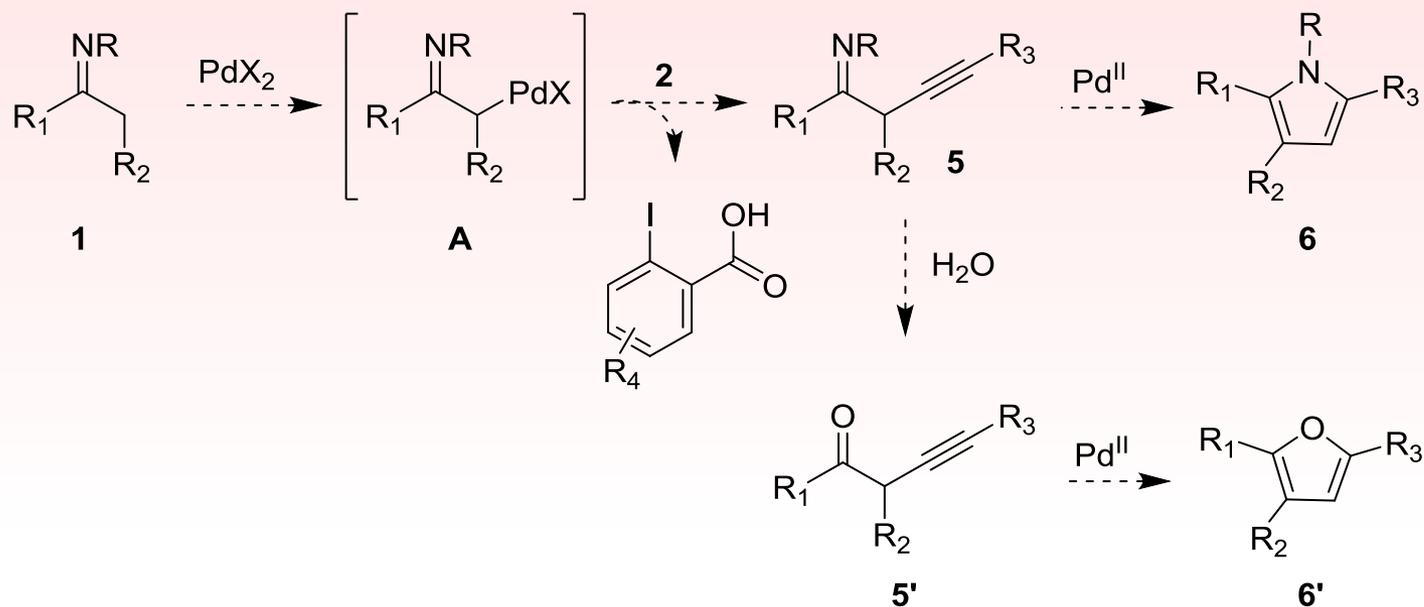

$\text{R}_1 = \text{H, alkyl}$
 $\text{R}_2 = \text{Ph with EWG or EDG, alkyl}$

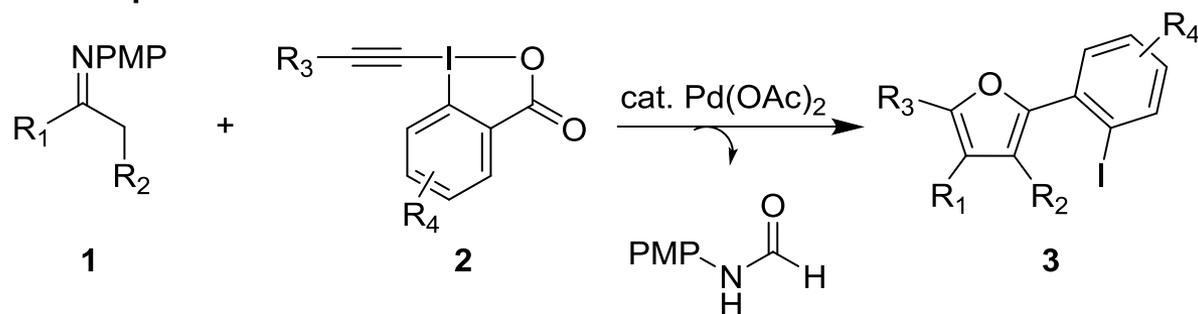

Org. Lett. **2013**, *15*, 1966.

Pd(II)-Catalyzed Coupling of Imine and Alkynylbenziodoxolone

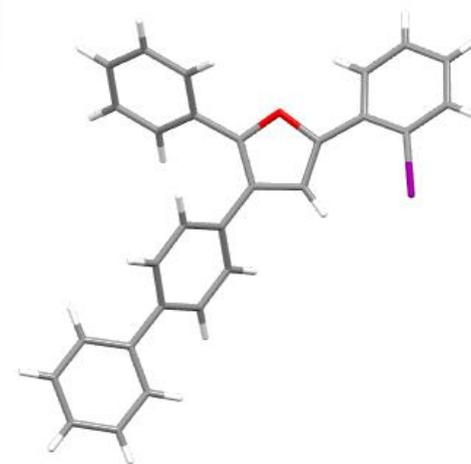

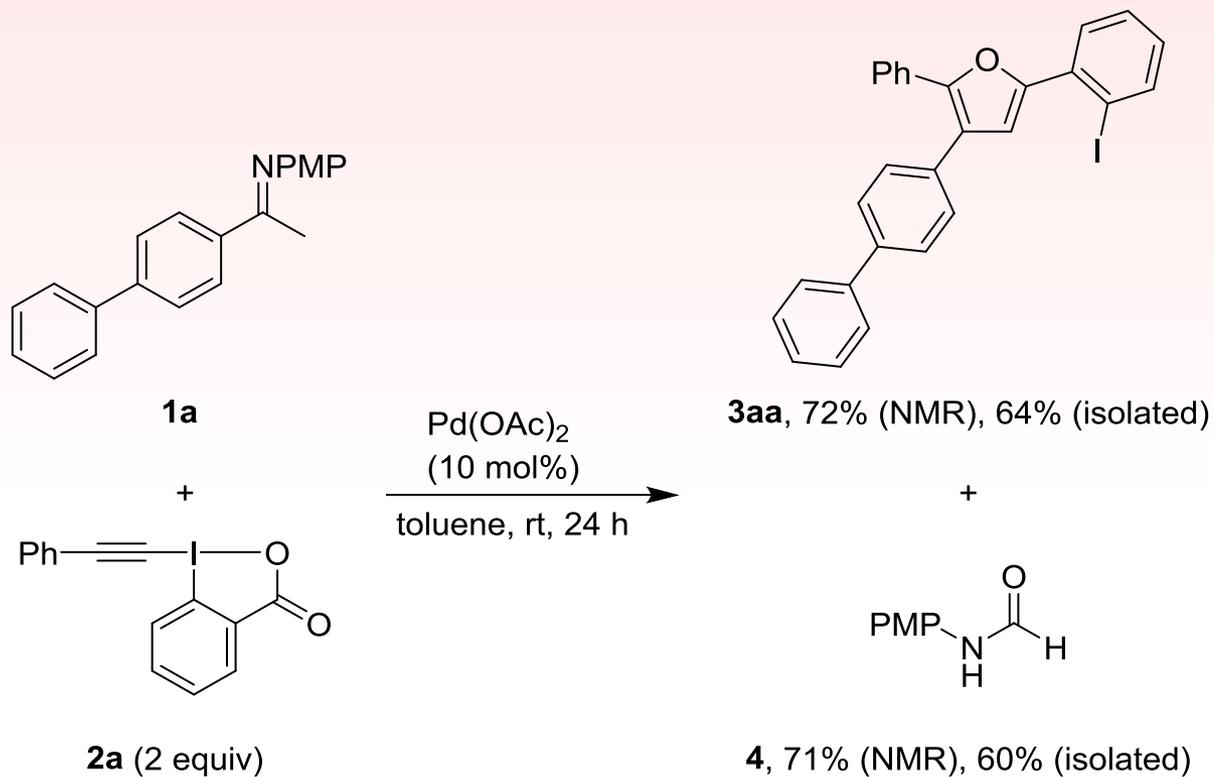

Initial Expectation based on Previous Work

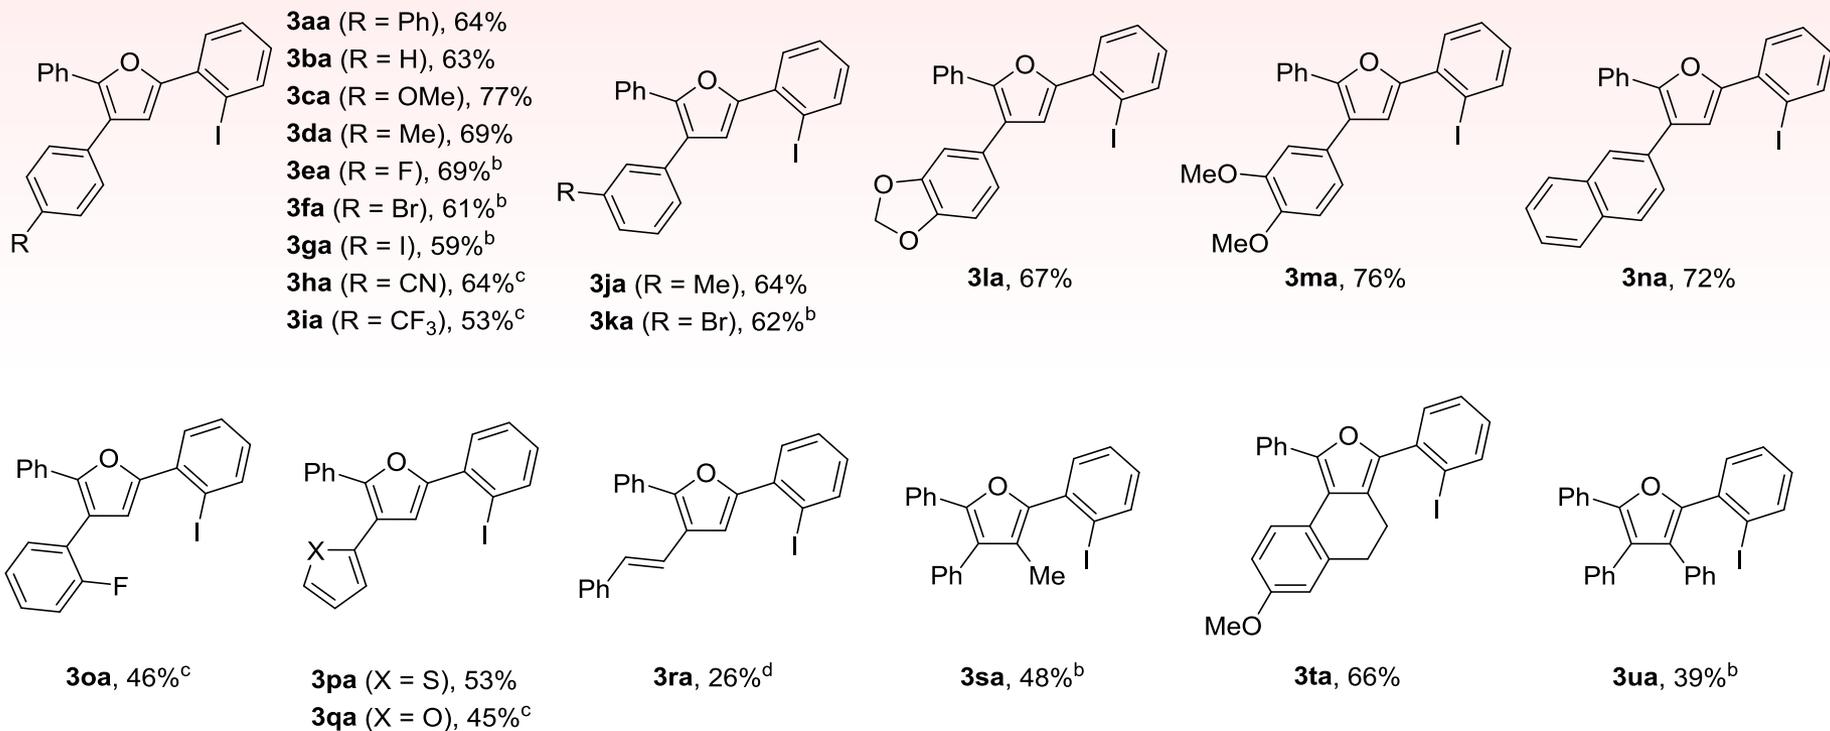

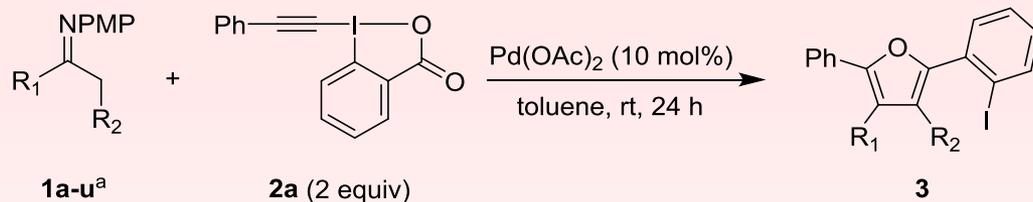

Title Paper

Initial Result

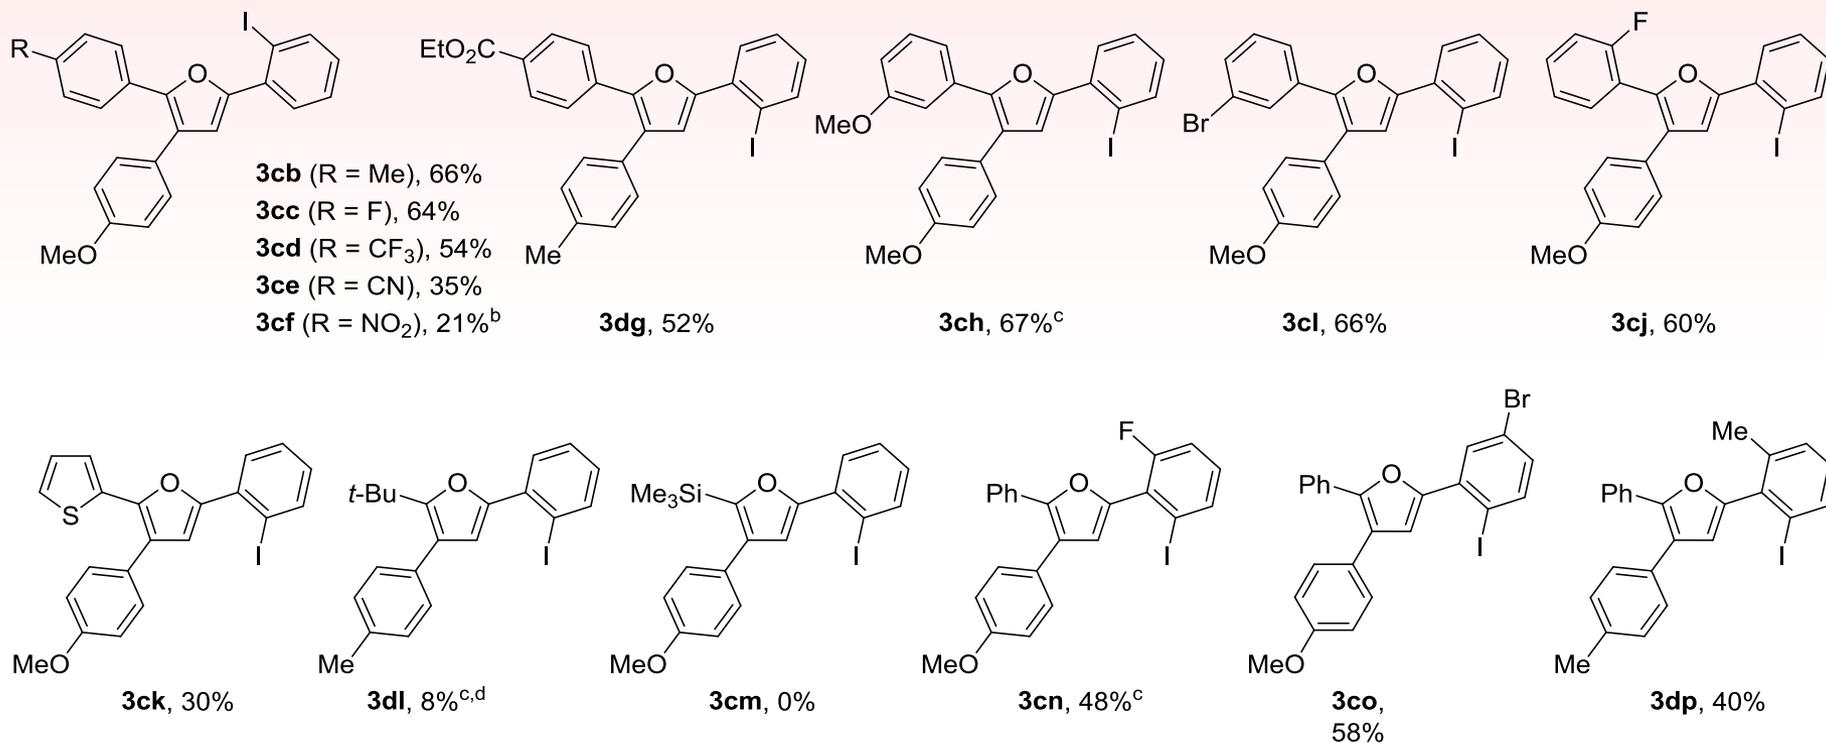

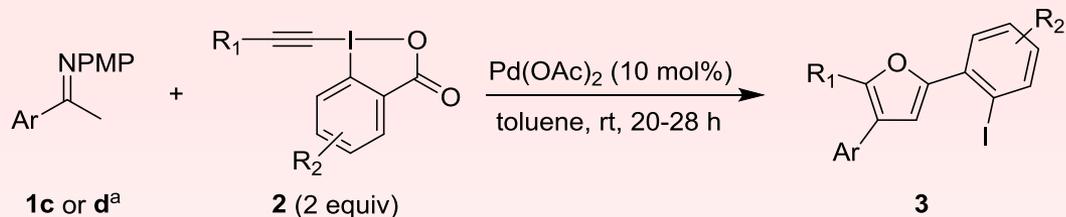

Scope of Imines

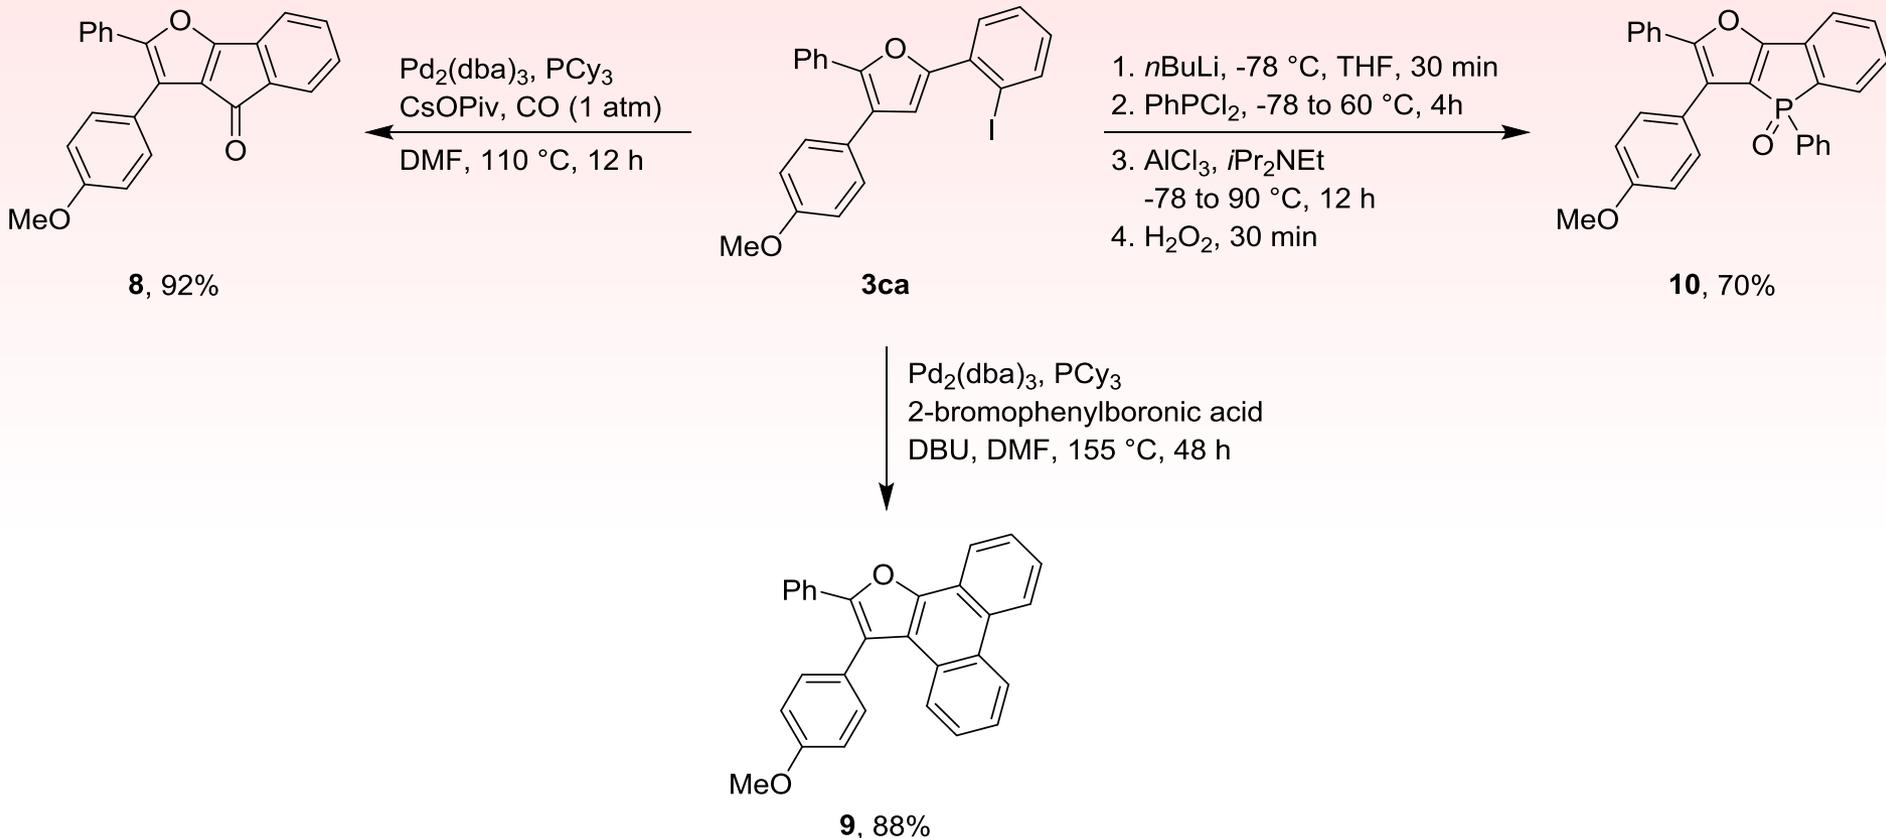

^a0.2 mmol scale. ^bReaction time was 48 h. ^cReaction at 40 °C for 20 h. ^dReaction at 70 °C for 24 h.

Scope of EBX

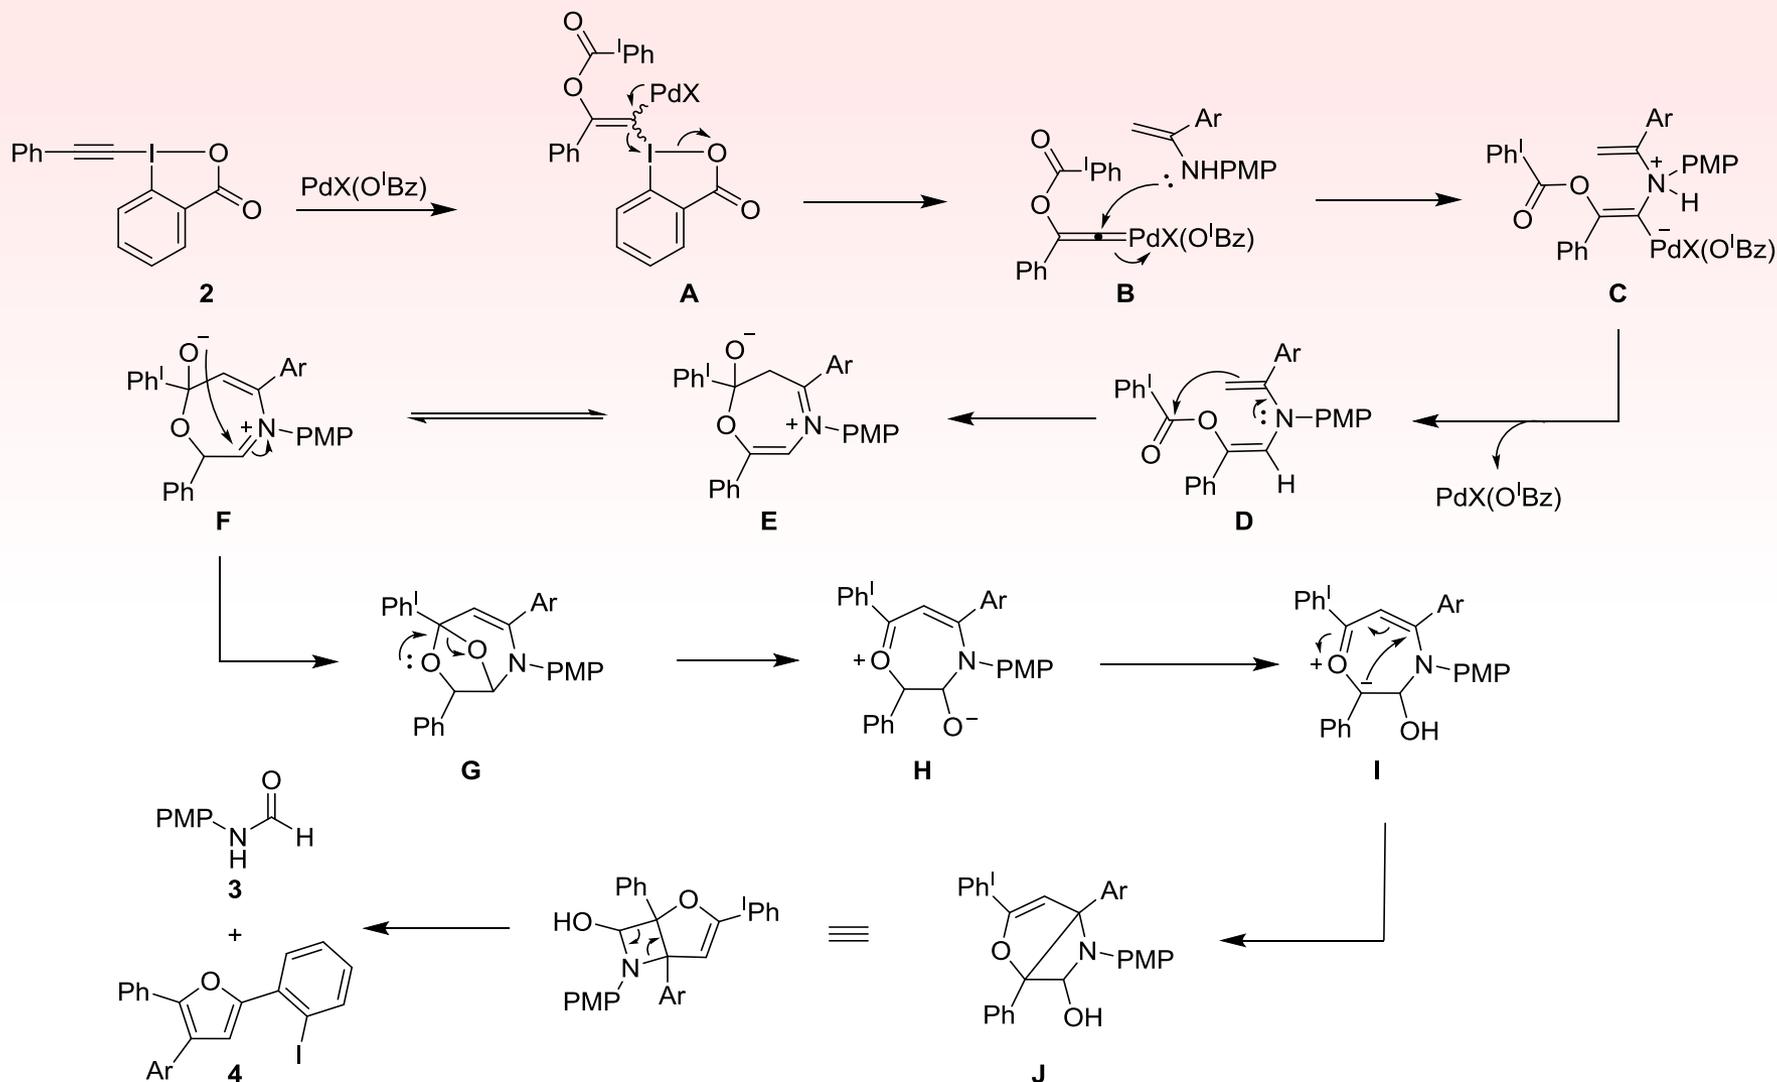

^a0.2 mmol scale. ^bReaction at 40 °C for 20 h. ^cReaction time was 48 h. ^dCH₂Cl₂ was the solvent.

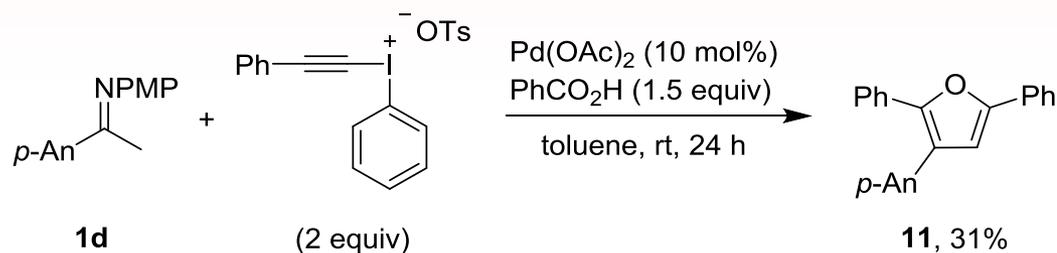

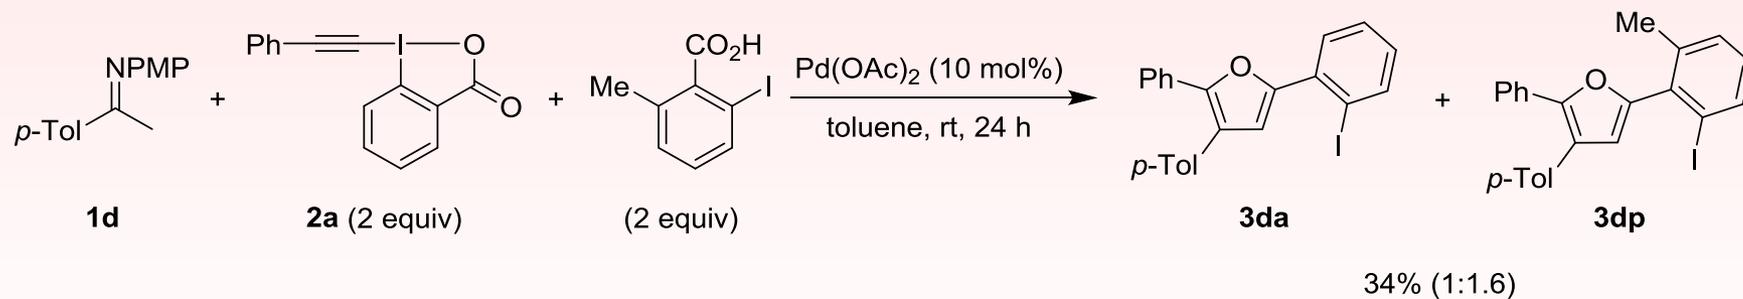

Transformations of Furan 3ca

“Highly Speculative” Mechanism

Three Component Reaction

Conclusions

- Valuable addition to the synthesis of multisubstituted furans.
- Limited C(2) substitution to iodo-benzene from EBX. But the aryl iodide provides a handle for additional transformations. Three component reaction can address this limitation.
- Some limitation to aryl substitutions (vs. alkyl).
- Additional mechanistic studies needed.
