Proposed Aza-Heck cyclization

Mechanism

Optimization of oxidative addition:

- Choice of electron withdrawing nature of R

$$\begin{array}{ccc}
0, & & & & 0, & 0 \\
R, & & & & & & & & \\
N - OR & & & & & & & \\
R & & & & & & & \\
& & & & & & & \\
\end{array}$$

Optimization of alkene insertion:

- Addition of NEt₃

Limitation of this aza-Pd II intermediate:

- Protodepalladation
- *B*-hydride elimination

Leila Terrab @ Wipf Group Page 4 of 8

$$\begin{array}{c} \text{Ms} \\ \text{N} \\ \text{Ph} \\ \text{Me} \\ & \begin{array}{c} \text{Pd}_2(\text{dba})_3 \ (2.5\text{-}5 \ \text{mol}\%) \\ \\ \text{P(3,5-(CF_3)_2C_6H_3)_3} \ (12.5\text{-}25 \ \text{mol}\%) \\ \\ \text{Et}_3\text{N} \ (25\text{-}50 \ \text{mol}\%) \\ \\ \text{Solvent} \ (\textbf{0.1 M})^{[a]} \\ \\ \text{95-140 °C} \\ \\ \\ \text{58\% Yield} \\ \text{(>10:1 d.r.)} \\ \end{array}$$

solvent: n-BuCN:DMF

Interesting aza-Heck applications

Comparison to aza-Wacker cyclization

aza-Wacker cyclization of alkenyl NH-sulfonamides:

$$\begin{array}{c|c} & & Pd(II) \\ \hline \\ N & Ts \\ H & & \hline \\ O_2 & & \\ Ts & & \\ \end{array}$$

- Alkenyl NH sulfonamides not prepared directly from the alcohol
- Electron-deficient alkenes not used due to possible conjugate addition
- Can not engage in cascade polycyclizations and bridged systems

Ts
$$O^{F}Bz$$
 Ts $CO_{2}Me$ $O_{2}Me$

aza-Heck electron-deficient alkene

Summary

- Expanded the application of aza-Heck cyclizations beyond the previously reported Narasaka-Heck reaction (limited to oximes as SM)
- Used the nitrenoid property of N-(pentafluorobenzoyloxy)sulfonamides to install alkene substituents and to undergo the Pd-catalysis cyclization
