The Myrioneuron alkaloid

1

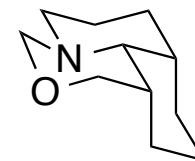

- Isolated from southeast asian plant **Myrioneuron nutans**, **Schoberine**, **Mytioxazine A**, **Mytioxazine B** have been synthesized by Bernard Bodo

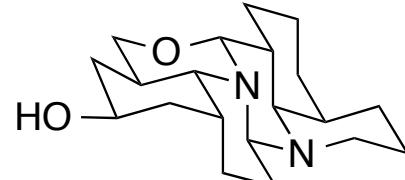

Schoberine

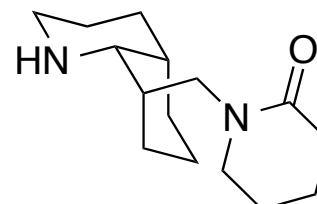

Mytioxazine A

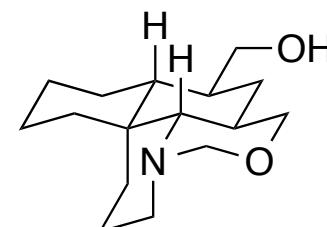

Mytioxazine B

Myrobotinol

Myrionine

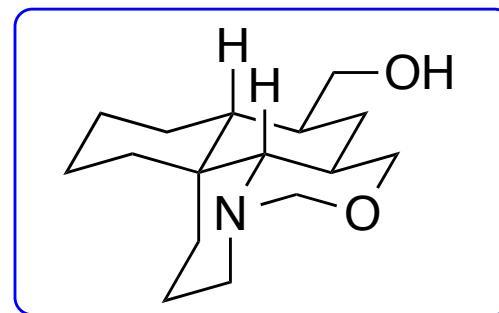

Myrioneurinol

The Myrioneuron alkaloid

Myrioneurinol

2

- New member of the Myrioneuron alkaloid, isolated from leaves of *Myrioneuron nutans*
- significant antimalarial activity against *Plasmodium falciparum* (IC_{50} : 11 mg/mL)
- Four tightly fused, rigid array of chair six-membered rings

Myrioneurinol

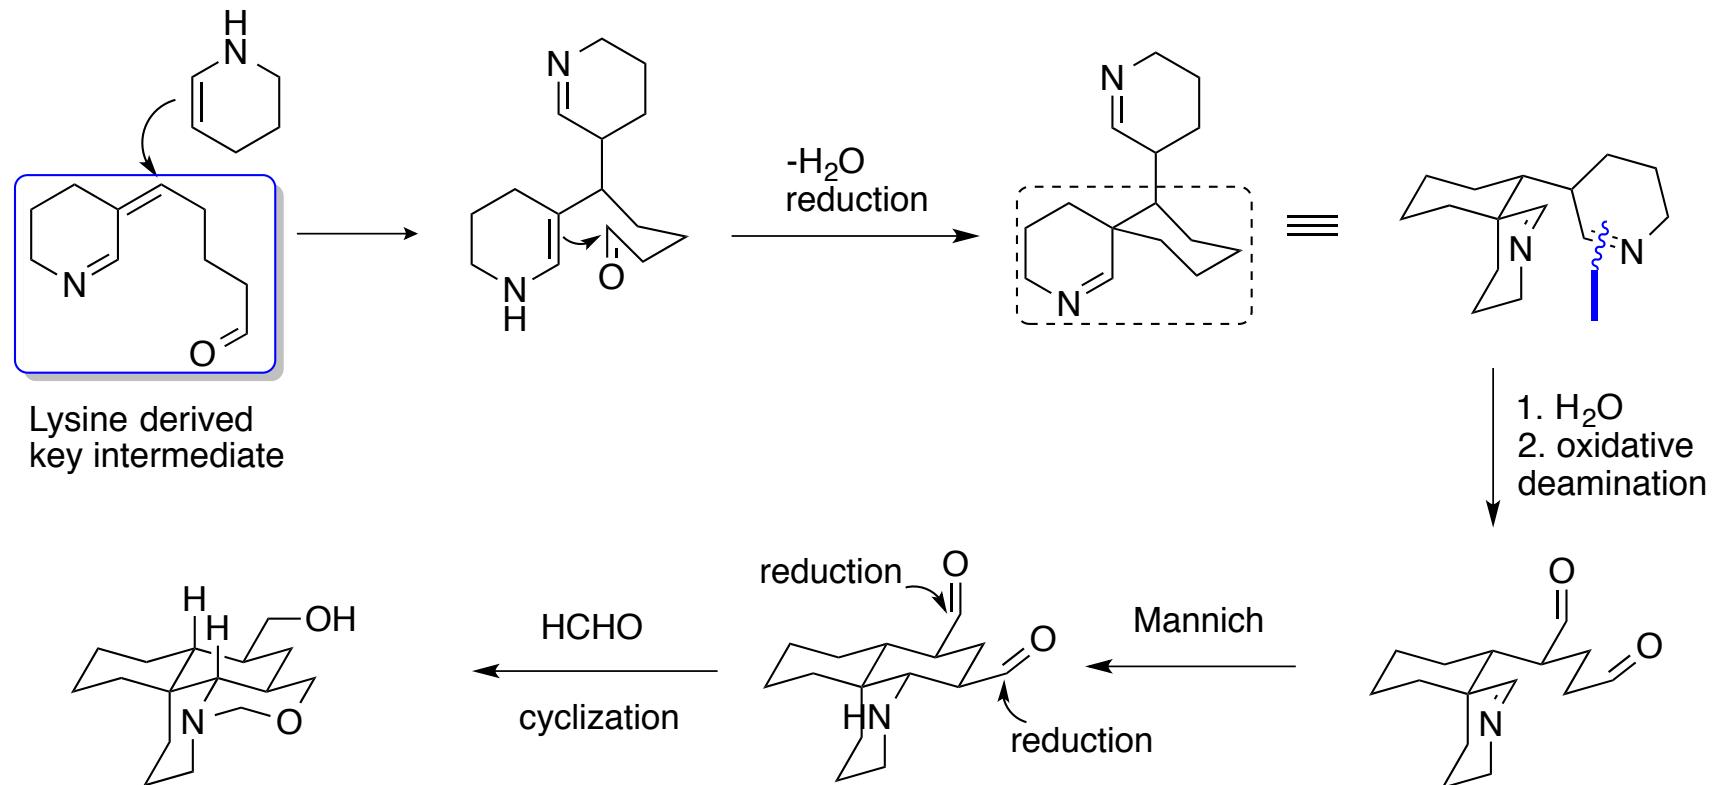

Tetrahedron 63 (2007) 11244–11249

Tetrahedron Letters 43 (2002) 7565–7568

J. Org. Chem. 2008, 73, 7565–7573

Biosynthesis

3

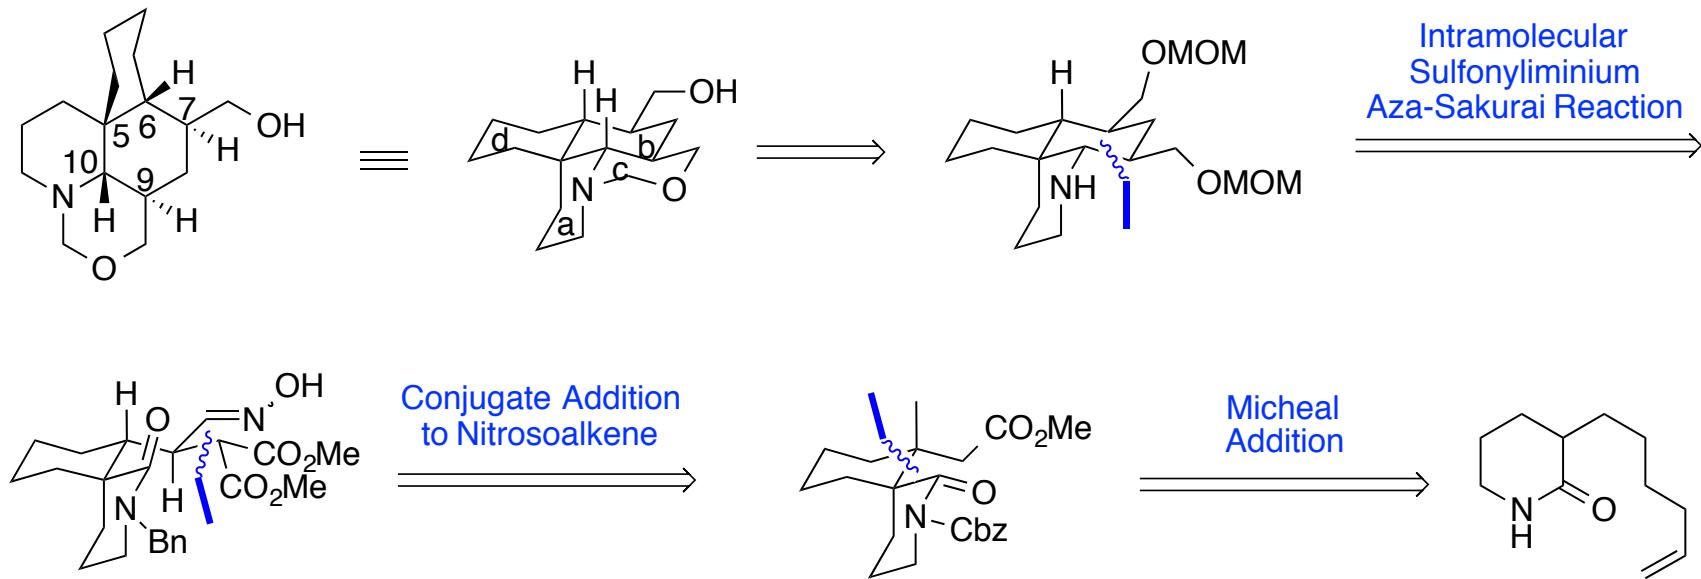

Plausible biosynthetic pathway to myrioneurinol

Nat. Prod. Rep., 2010, 27, 32–56

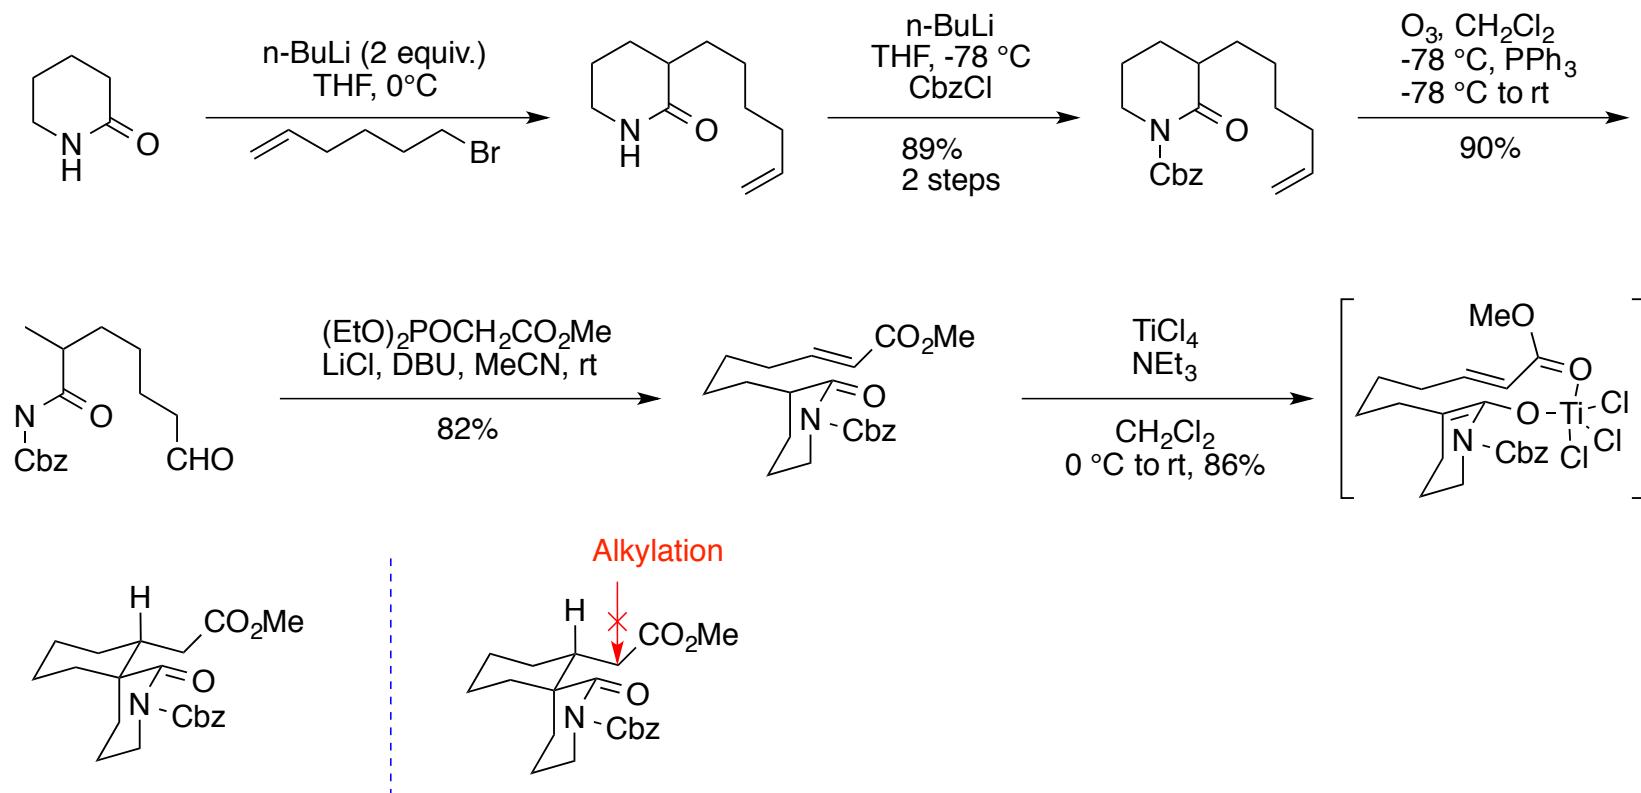

Retrosynthesis

4

a/d Ring – Michael addition

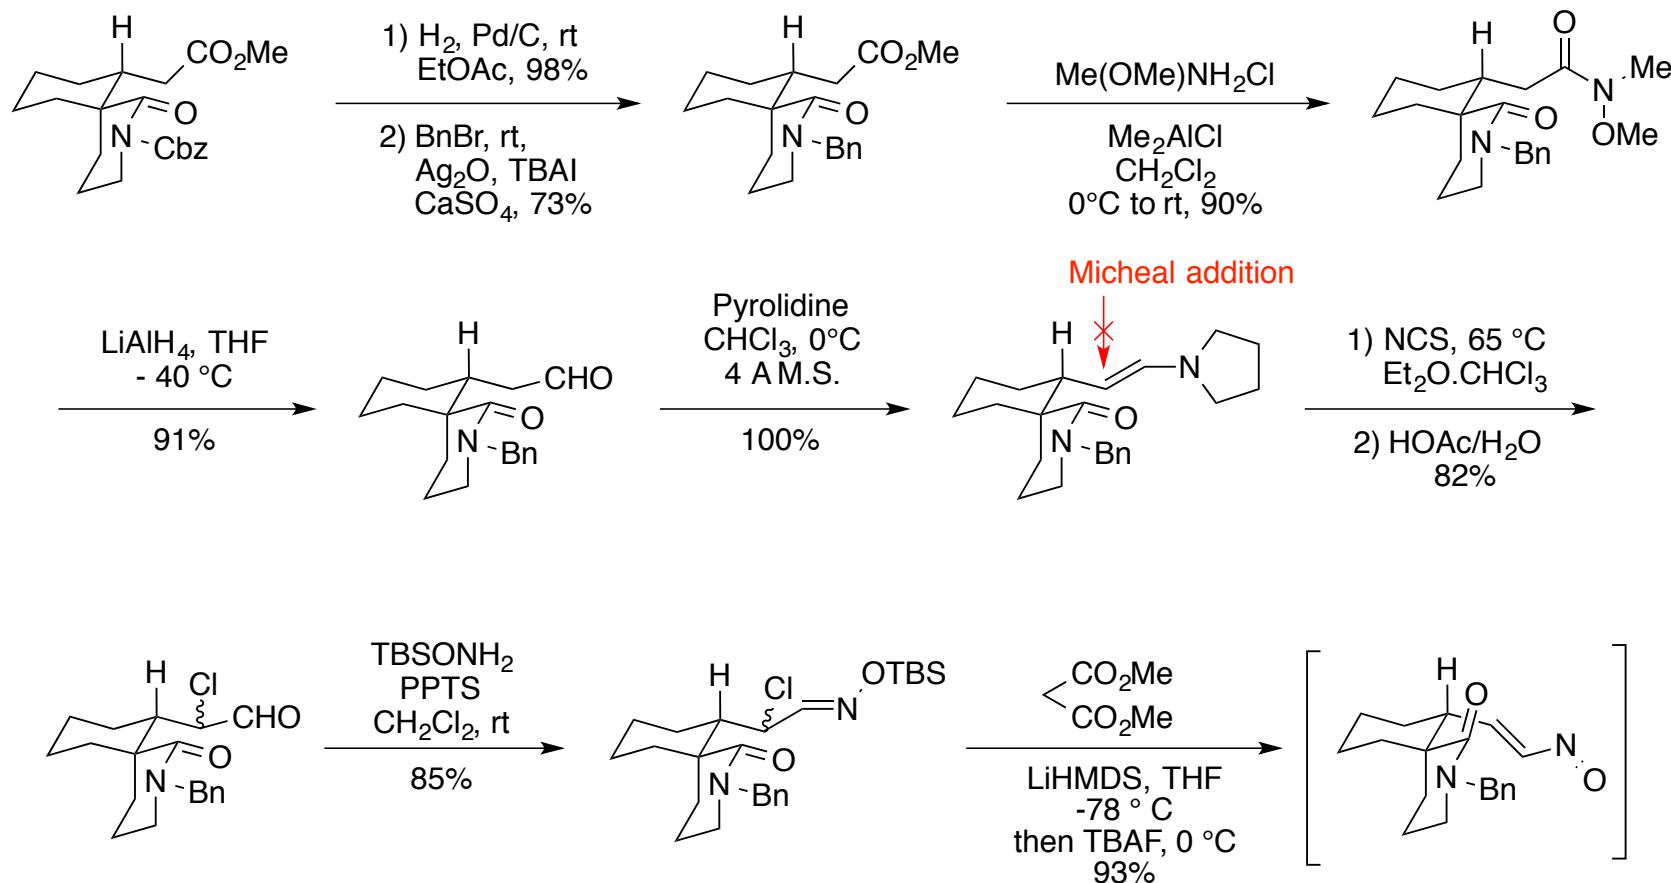

5

J. Org. Chem. **1991**, *56*, 5750
Tetrahedron Lett. **1989**, *30*, 6511

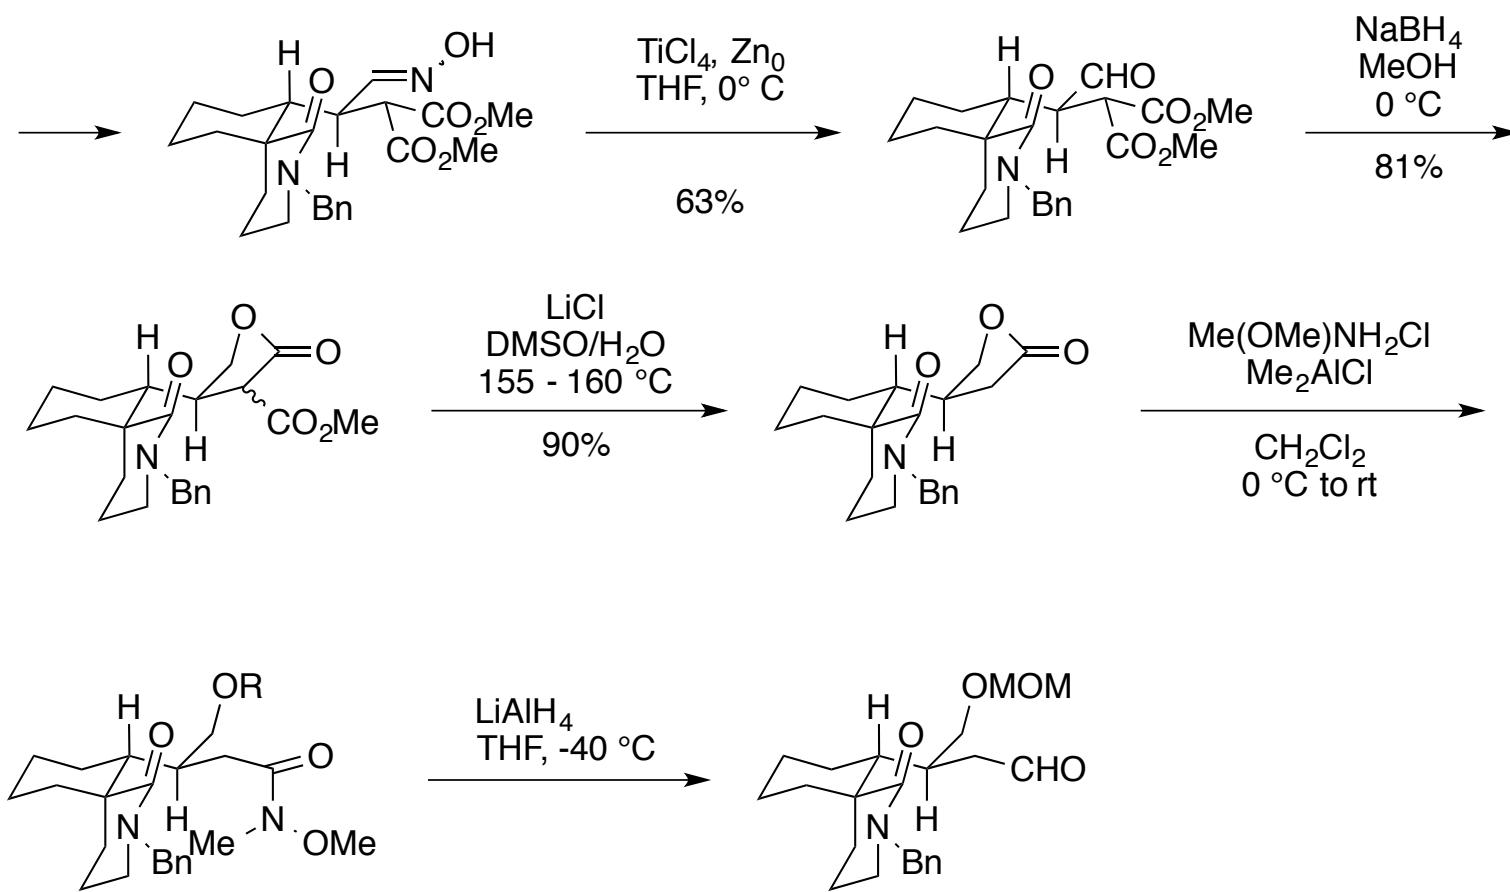

C7-Pains and gains

6

Conjugate Addition to a Nitrosoalkene

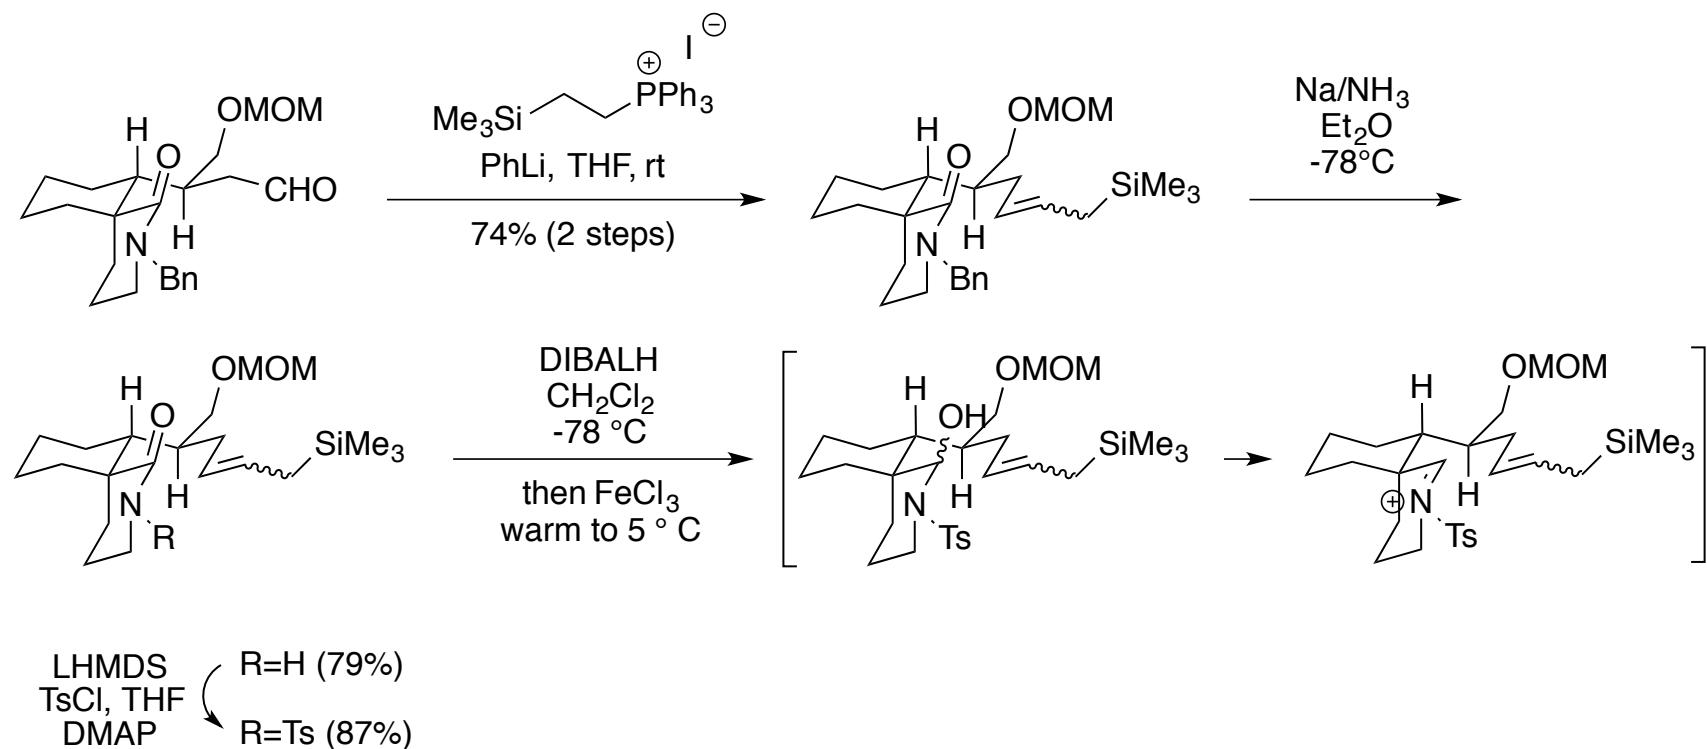

7

Tetrahedron Lett. **2010**, *51*, 2032
Org. Lett. **2011**, *13*, 1258.

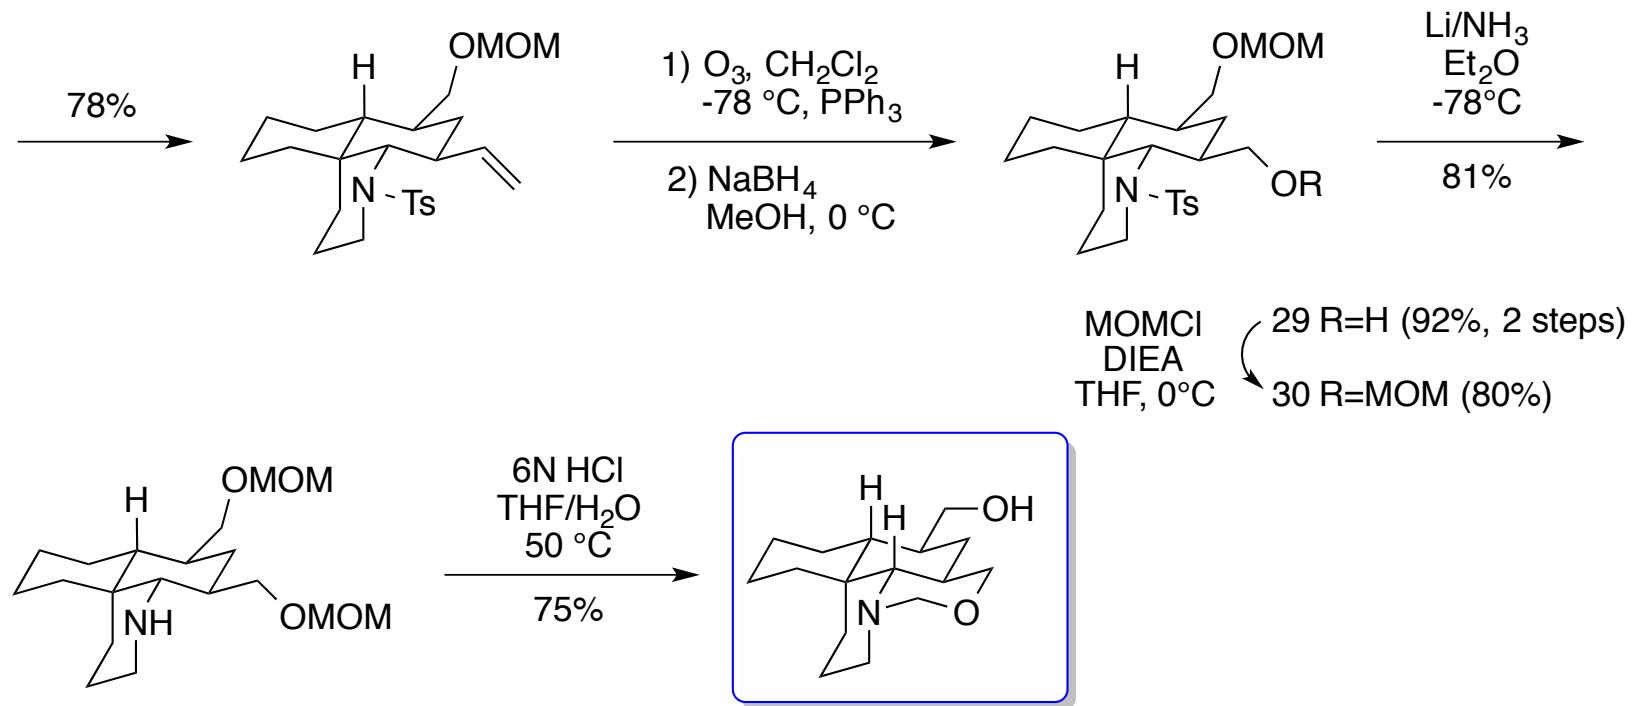

Sulfonyliminium Sakurai Reaction

8

J. Organomet. Chem. **1979**, *181*, 293.

J. Org. Chem. **2006**, *71*, 2078

Conclusion

- First total synthesis (\pm)-Myrioneurinol
- 28 steps, 1.8% yield
- Three highly diastereoselective reactions to install the correct configuration at the C5/C6, C7, C9/C10 configuration
