“Cross-Coupling of Alkyl Halides with Aryl
Grignard Reagents Catalyzed by a Low-
Valent Iron Complex,”
Angew. Chem. Int. Ed. **2004**, 43, 3955-3957.

Tyler E. Benedum
Current Literature
October 16, 2004

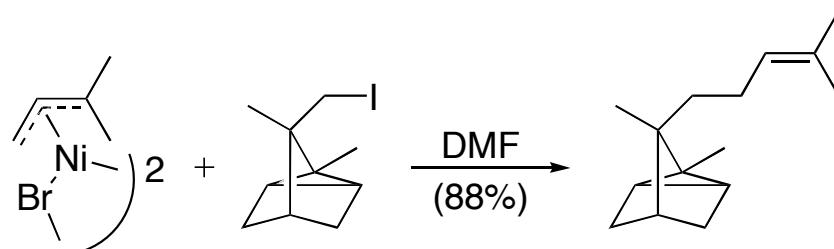

Topics

- ⌚ Background
- ⌚ Early examples of aliphatic halide cross-coupling
- ⌚ Kochi's work with iron catalyzed cross-coupling
- ⌚ Recent low valent iron-catalyzed cross-coupling
 - ◆ E. Nakamura
 - ◆ T. Hayashi
 - ◆ A. Fürstner
- ⌚ Summary

Background

- ⌚ Numerous examples of palladium- and nickel-catalyzed cross-coupling reactions with aryl and vinyl halides in the literature
- ⌚ Alkyl halides have recently been included in the scope of this methodology
 - ◆ Predominance of literature *post*-2000
- ⌚ First reported transition metal complex reacting with sp³ carbon-iodide bond in 1967

(Corey, E.J.; Semmelhack, M.F. *J. Am. Chem. Soc.* **1967**, 89, 2755-2757.)

Kumada-Corriu Reaction

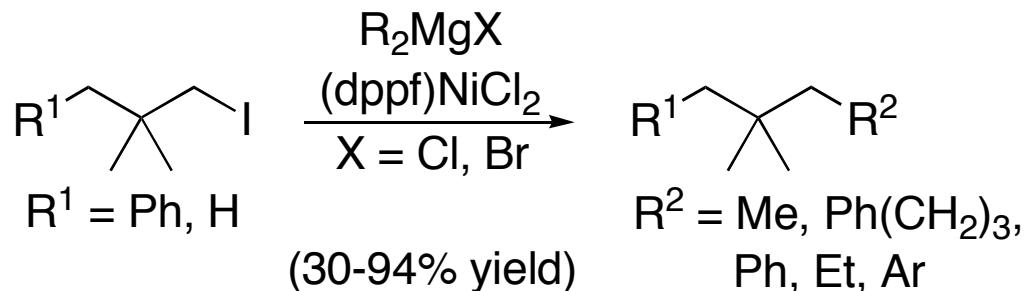

Ø 1986 - First cross-coupling reaction employing Pd(0) and using simple aliphatic iodides with a variety of Grignard reagents

(Castle, P.L.; Widdowson, D.A. *Tetrahedron Lett.* **1986**, 27, 6013-6016.)

- ◆ However, disproportionation also occurs under these conditions

(Yuan, K.; Scott, W.J. *Tetrahedron Lett.* **1989**, 30, 4779-4782; *J. Org. Chem.* **1990**, 55, 6188-6194; *Tetrahedron Lett.* **1991**, 32, 189-192.)

Ø Yuan conducted more detailed study with neopentyl substrates

Suzuki Reaction

❖ Functional group tolerance

- ◆ Esters, ketals, cyano

(Ishiyama, T.; Abe, S.; Miyaura, N.; Suzuki, A. *Chem. Lett.* **1992**, 691-694.)

R ¹	R ² -9-BBN (PPh ₃) ₄ Pd	R ¹ R ²
R ¹	R ² ; (% yield)	
Me	MeO ₂ C(CH ₂) ₁₀ ; (71)	
C ₆ H ₁₃	C ₈ H ₁₇ ; (64)	
t-Bu	MeO ₂ C(CH ₂) ₁₀ ; (45)	
C ₆ H ₁₃	BnOCH ₂ CH ₂ CHMe; (58)	
NC(CH ₂) ₃	Me ₂ C=CH(CH ₂) ₂ CHMe(CH ₂) ₃ ; (61)	
C ₁₀ H ₂₁	Me(CH ₂) ₃ CH=CH; (64)	

❖ Approach extended to iodocycloproanes and their coupling to boronic acids and esters

Stille Reaction

Successful coupling of alkyl halides with various organostannanes

R^1I	$\xrightarrow[ML_n]{R^2-SnBu_3}$	R^1R^2
R^1	R^2 ; (% yield)	
$C_8F_{17}(CH_2)_2$	allyl; (57) (E) -PhCH=CH; (83) Ph; (68)

CF_3	allyl; (24)	
C_6F_{13}	$C_6H_{13}C\equiv C$; (55)	

a) Shimizu, R.; Fuchikami, T. *Tetrahedron Lett.* **1996**, 37, 8405-8408.

b) Matsubara, S.; Mitani, M.; Utimoto, K. *Tetrahedron Lett.* **1987**, 28, 5857-5860.

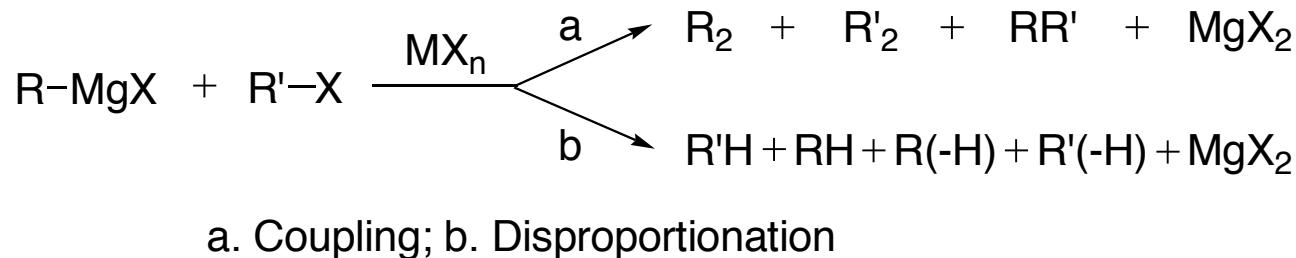

Kochi's Early Work with Iron

- ❖ Electron transfer mechanisms for organometallic intermediates in catalytic reactions
 - ◆ Specifically, studied the reduction of ferrous and ferric chloride
- ❖ Applied his findings to metal-catalyzed alkyl transfer reactions of Grignard reagents
 - ◆ Known generally as the Kharasch (Kumada) reaction

Kochi, J.K. *Acc. Chem. Res.* **1974**, 7, 351-370.

Kochi, et al. and the Kharasch Reaction

- Reaction between organometals and alkyl halides using catalytic transition metal complexes

- Silver (I) and copper (I) are effective catalysts for pathway a
- Iron, however, causes the reaction to proceed via pathway b
 - Except with aryl and vinyl halides and substrates lacking β -hydrogens (methyl, neopentyl, and benzyl)

Tamura, M.; Kochi, J. K. *J. Organometal. Chem.* 1971, 31, 289-309

Mechanistic Viewpoint

⦿ Kochi proposes:

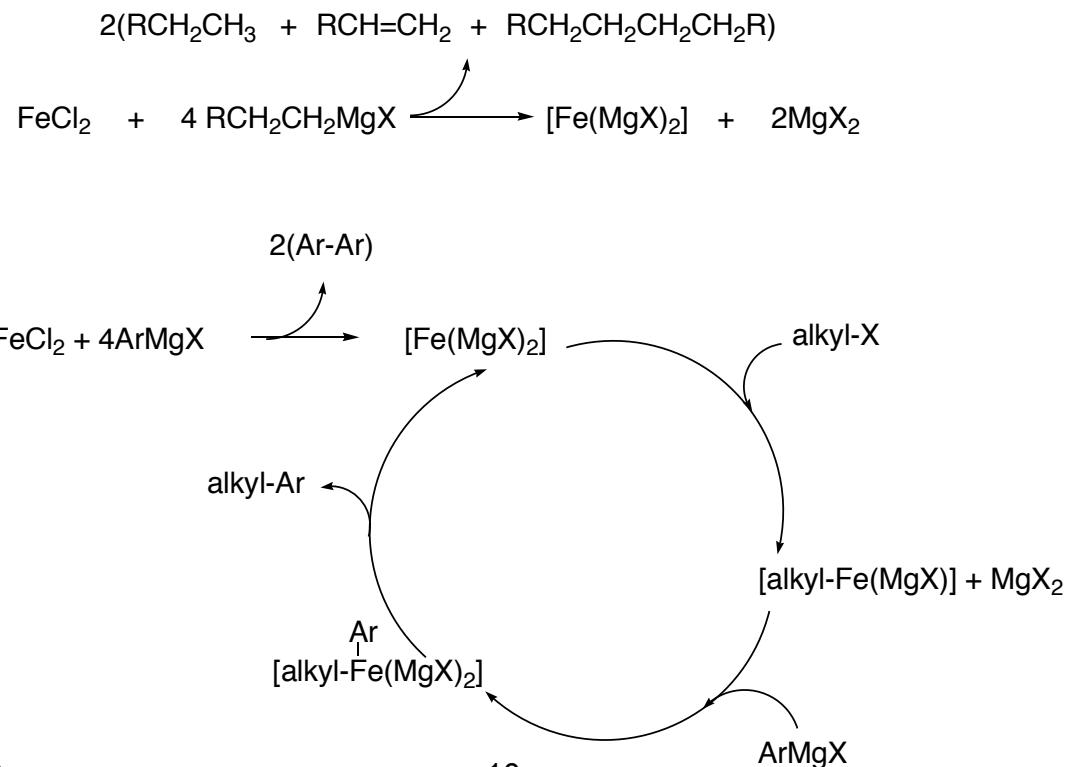

⦿ The instability of the alkyliron intermediate, compared to other alkylmetal intermediates, possibly results in disproportionation versus coupling

- ◆ Iron intermediate suffers from fast β -hydride elimination

A Low Valent Iron?

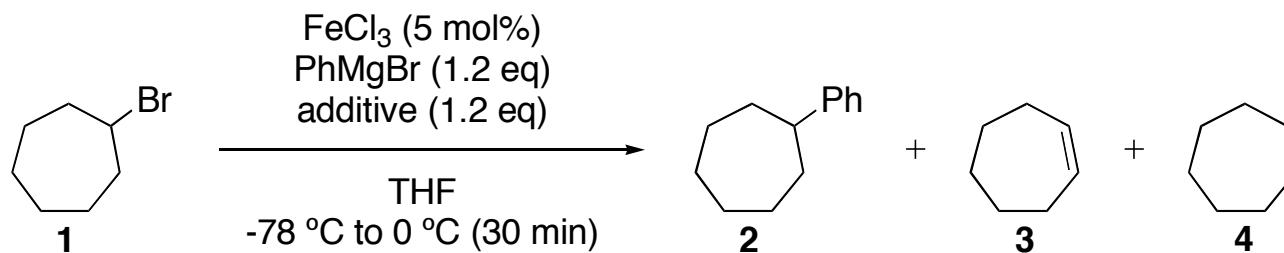

❖ New, Generally “Accepted” Catalytic Cycle

- ◆ “...speculated that highly reduced iron-magnesium clusters of the formal composition $[Fe(MgX)_2]_n$ generated *in situ* may play a decisive role in the catalytic cycle.” (Martin,R.; Fürstner, A. *Angew. Chem. Int. Ed.* **2004**, 43, 3955-3957.)

E. Nakamura's Research

Nakamura, M.; Matsuo, K.; Ito, S.; Nakamura, E. *J. Am. Chem. Soc.* **2004**, *126*, 3686-3687.

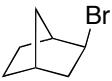

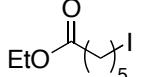

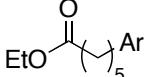

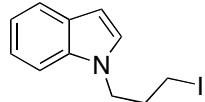

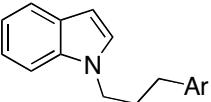

Entry	additive	% yield

4*	diethyl ether	0.69	0.18	0.09	0	0.08

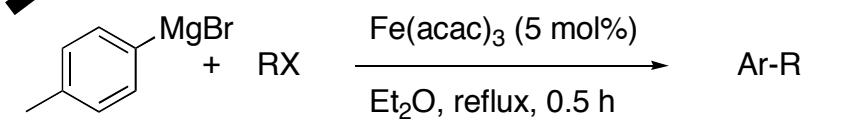

*Reaction was carried out in refluxing diethyl ether.

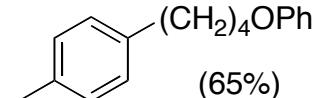

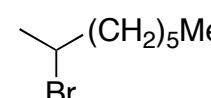

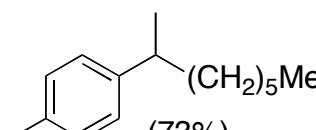

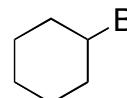

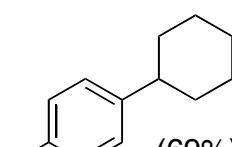

Hayashi's Studies

Ar = 4-MeC₆H₄, 4-MeOC₆H₄, 4-FC₆H₄,
2-MeC₆H₄, or 2,4,6-Me₃C₆H₂

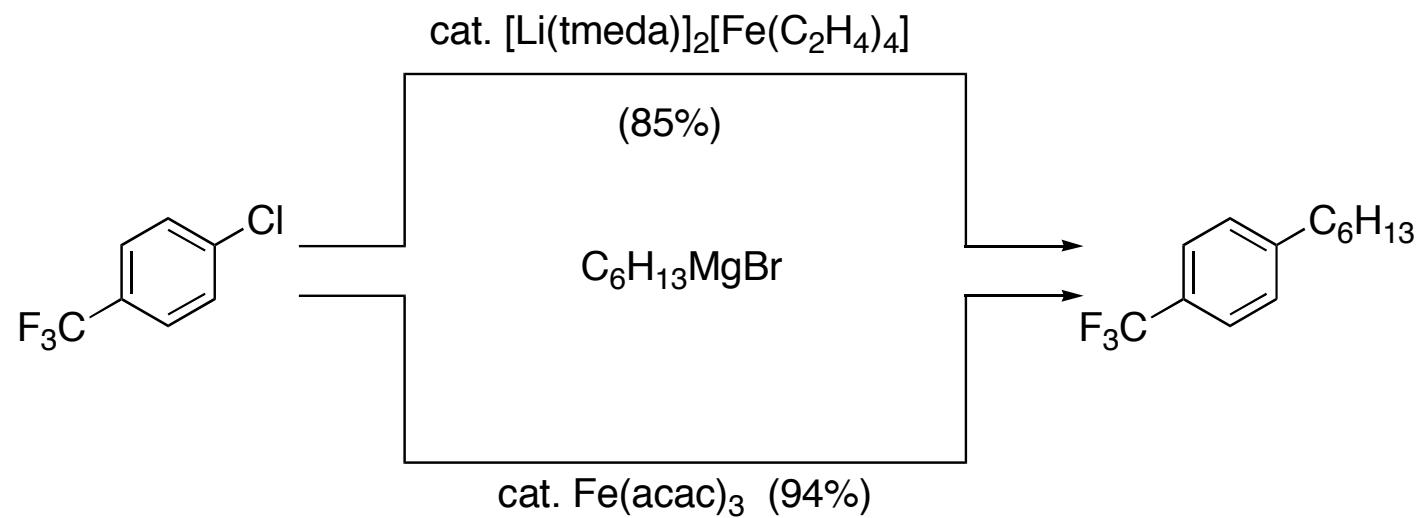

R = n-C₆H₅
X = Br, Cl, I, or OTs

RX =	Product (% yield)
PhO(CH ₂) ₄ Br	 (65%)
	 (73%)
	 (69%)

Fürstner

⌚ Initial studies

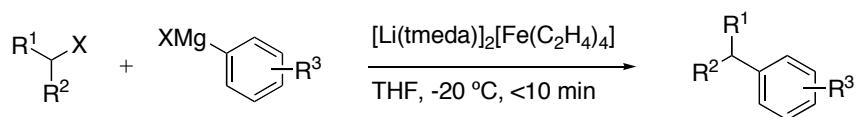

⌚ Low-valent catalyst described by Jonas

(Jonas, K.; Schieferstein, C.; Krüger, C.; Tsay, Y.-H. *Angew. Chem. Int. Ed.* **1979**, *18*, 549-550.)

Fürstner

Scope

- ◆ Alkyl halides with aryl Grignard reagents and phenyllithium
- ◆ Primary alkyl iodides
- ◆ Secondary alkyl bromides
- ◆ Propargyl and allyl halides

Substrate	RMgX/RLi	Product	Yield (%)
cyclohexyl bromide	PhMgBr PhLi 4-MeOC ₆ H ₄ MgBr 4-ClC ₆ H ₄ 4-PhC ₆ H ₄ MgBr 3-(TMS) ₂ NC ₆ H ₄ MgBr	cyclohexylbenzene substituted with X	94 (X = H) 92 (X = H) 95 (X = OMe) 67 (X = Cl) 93 (X = Ph) 88 (X = NH ₂)
cyclohexyl bromide	4-MeC ₆ H ₄ MgBr	cyclohexylbenzene substituted with two methyl groups	95
cyclohexyl ethyl halides	PhMgBr PhMgBr	cyclohexylalkane substituted with phenyl group	96 (X = I) 61 (X = Br)
cyclohexyl ethyl iodide	2,4-(CH ₃) ₂ C ₆ H ₃ MgBr	cyclohexylalkane substituted with phenyl group and two methyl groups	94
isopropyl iodide	PhMgBr	isopropylbenzene	74
1-bromoheptane	PhMgBr	1-phenylheptane	93
2-bromo-3-methylpent-3-ene	PhMgBr	2-phenyl-3-methylpent-3-ene	89
2-bromo-3-methylpent-2-ene	PhMgBr	2-phenyl-3-methylpent-2-ene	84

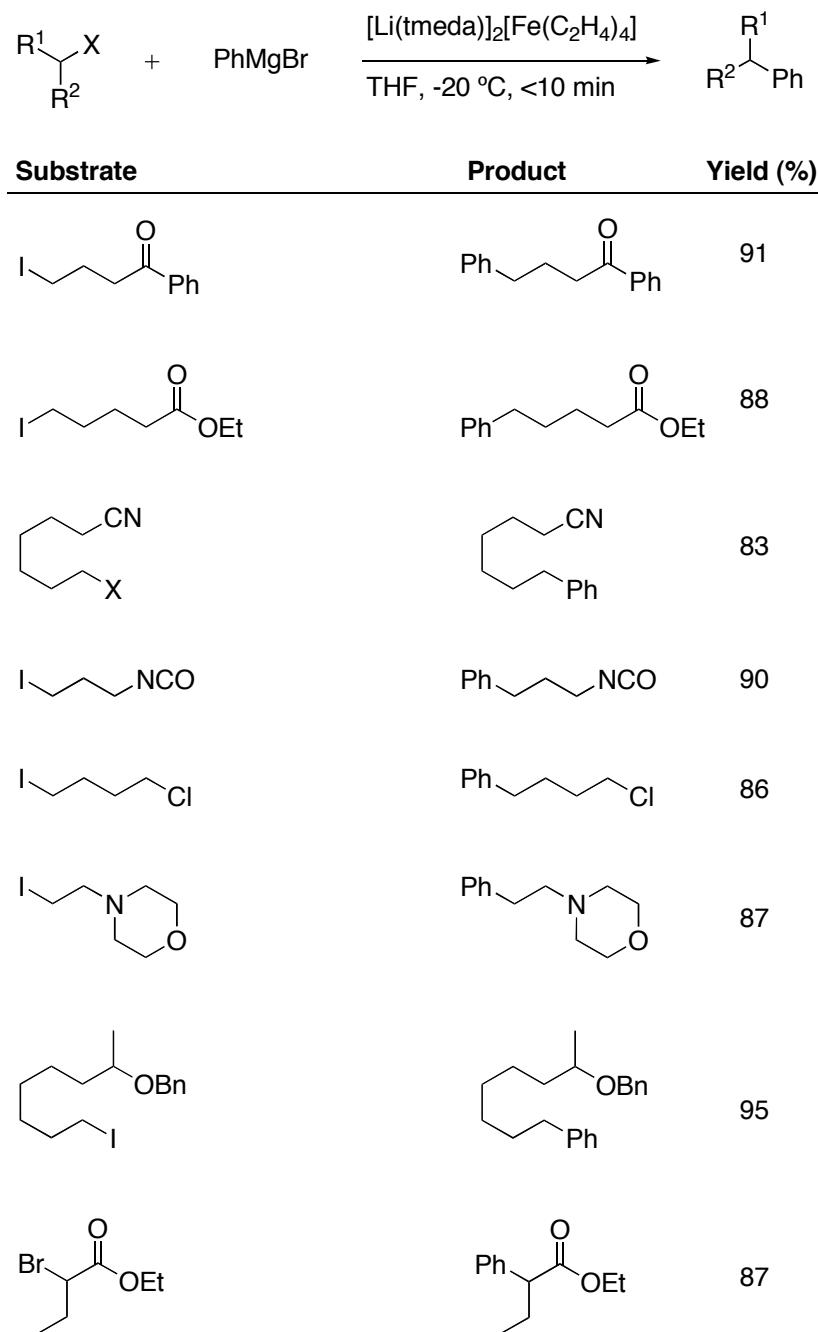

Limitations

- ◆ Tertiary halides
- ◆ Alkyl chlorides

Fürstner

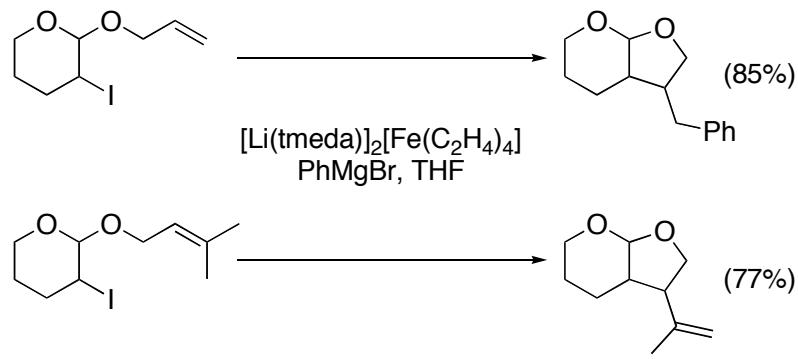

◊ Activation of the alkyl halide significantly faster than the attack of Grignard reagent to functional groups

- ◆ Ketones
- ◆ Esters
- ◆ Enoates
- ◆ Chlorides
- ◆ Nitriles
- ◆ Isocyanates
- ◆ Ethers
- ◆ Acetals

Fürstner

❖ First effective example of iron-catalyzed cross-coupling of allylic halides

Highlights of Iron-Catalysis

- ↳ Low Cost
- ↳ Readily-available
- ↳ Practical and “Green”
- ↳ Scalability
- ↳ Catalytic (compared to organocopper reagents)
- ↳ Little optimization required
- ↳ No requirements for special ligands
- ↳ Relatively unreactive 2° bromides and chlorides undergo coupling
- ↳ High reaction rates (rxns proceed within 20 min)
- ↳ Mild conditions (-20 °C to 40 °C)

Summary

❖ Conclusion

- ◆ Ability to couple various aryl Grignard reagents with a variety of alkyl halides in high yields
- ◆ Extension of sp^3 coupling methodology
- ◆ Further insight into the mechanism of iron-catalyzed couplings

❖ Future Work

- ◆ Apply methodology to sp^3 - sp^3 coupling reactions
- ◆ Continue to elucidate the reaction mechanism
